Team	Goal	Comments
Networking	- Determine protocols - Determine ports - Meeting with Prof. Shimkanon - Backup (AWS, hosting, etc.)	
Team Facing	- Transfer embedded IDE to design - Centralized list for API calls - Compiling for languages (Python at minimum) - Terminal to see output	
Judge Facing	- Working with Networking team for redirects - JSON formatting with Team facing - API call sheet with Team Facing	
Security	- Basic routing logic / user authentication - Database subteam working with database team for implementation - Auto-generation of team-side passwords / storing Judge login info	
Design	- Login frontend - Working with Team/Judge for routing/API calls	
Database	- Judge facing meeting for API calls - Discussing data formatting - ER Diagram - Conceptual	- SQL - Oracle

Working prototype:

- Login functionality

- Information / user routing

- IDE implementation and compilation

- Scoreboard logic (adjusting scoreboard)

- Starting database / schema

- API calls for authentication,

- Allocated ports / backup / page routing
